Ivi Alex Franco Silva

Global Infrastructure & Platform Leader | Multi-Cloud Architecture (AWS • Azure • GCP) | Platform Engineering | Kubernetes | SRE | DevOps & DevSecOps | AI Platforms & MLOps

Paulínia, São Paulo, Brazil | +55 19 99285-4074 | ivialex@gmail.com | linkedin.com/in/ivialexfrancosilva | github.com/ivialex

PROFESSIONAL SUMMARY

Technology leader with **23+ years** of experience across global infrastructure, platform engineering, cloud architecture, Site Reliability Engineering (SRE), DevOps and DevSecOps, at HP Inc., Thomson Reuters (**17 years**, including Softway S.A. before its 2013 acquisition) AB InBev, and as a consultant for RDI Software, K2 Partnering Solutions and clients such as Carnival Corporation, Nokia, Mercedes-Benz, Fanatics, ActiveProspect and Alvaria.

My career has covered the full software lifecycle, from developer and functional architect to development coordinator, technical lead, DevOps lead, cloud architect and principal platform engineer. This lets me connect application delivery, platform architecture, security and operational reliability.

I design and lead secure, resilient and cost-efficient multi-cloud platforms on AWS, Azure and GCP, combining Kubernetes, Infrastructure as Code, GitOps, CI/CD automation, observability and shift-left security. At HP I lead the architecture of the enterprise AI platform and I am building an Internal Developer Platform (IDP) that gives engineering teams self-service access to infrastructure and standardized delivery. I have also extended my work to AI platforms (Microsoft Foundry, Amazon Bedrock, Azure Machine Learning, Amazon SageMaker AI, Azure OpenAI, OpenAI GPT and Anthropic Claude, including RAG and vector search) and to AI-assisted engineering with GitHub Copilot and Microsoft 365 Copilot.

Alongside my industry career, I taught **16 undergraduate subjects** across five programs at the Pontifical Catholic University of Campinas (2011–2018), and I have taught cloud and DevOps as an invited instructor and speaker (IGTI/XP Educação, APETI). This shapes how I mentor engineers and communicate with technical and business stakeholders.

KEY RESULTS

99.95%	30%	25–40%	7–10
service availability	faster deployment lead time	infrastructure cost optimization	engineers led

CORE COMPETENCIES

- **Leadership & Strategy:** platform strategy, infrastructure roadmaps, team leadership and mentoring, engineering standards, stakeholder communication
- **Cloud & Platform:** multi-cloud architecture (AWS, Azure, GCP), platform engineering, Internal Developer Platform (IDP), Kubernetes, Infrastructure as Code, GitOps, CI/CD automation, AWS landing zones (Control Tower), event-driven architectures (Kafka, RabbitMQ)
- **API Management & Integration:** Azure API Management (APIM), REST APIs, API policies, API products and subscriptions, API security, API testing and documentation, Azure Key Vault, Application Insights
- **AI & ML Platforms:** Microsoft Foundry, Amazon Bedrock, Azure Machine Learning, Amazon SageMaker AI, Azure OpenAI, Azure AI Search, OpenAI GPT and Anthropic Claude models, RAG and vector search, MLOps, LLMOps, AI-assisted engineering enablement
- **Security & Governance:** DevSecOps transformation, SAST/DAST/SCA/IAST, secrets management, Zero Trust, security governance, SOC 2 and ISO 27001 audit support
- **Reliability & Efficiency:** SRE practices, SLIs/SLOs and error budgets, observability (OpenTelemetry), incident response, FinOps and cloud cost optimization

PROFESSIONAL EXPERIENCE

HP Inc.

March 2024 – Present

Principal Platform Engineer

Tech stack: Microsoft Azure, Azure API Management (APIM), Application Insights, AWS, Azure AI Studio (now Microsoft Foundry), Azure OpenAI (GPT-4, GPT-4o), Azure AI Search, Amazon Bedrock, Amazon SageMaker AI, Azure Machine Learning, Anthropic Claude, AKS, EKS, Argo CD, Helm, Terraform, Terragrunt, Terratest, HashiCorp Vault, GitHub Actions, NGINX, Azure Application Gateway, SonarQube, Snyk, Trivy, TruffleHog, GitHub Copilot, Microsoft 365 Copilot

- Lead the end-to-end architecture of HP's enterprise AI platform, multi-cloud with Azure as primary and AWS as complementary, leading and mentoring a team of **7–10** engineers and partnering with SRE, DevOps, Product Management and Data Science.
- Lead the design and development of HP's Internal Developer Platform (IDP), giving engineering and data science teams self-service infrastructure, golden-path templates and built-in CI/CD, security and observability, using Kubernetes (AKS/EKS), Terraform, Argo CD and GitHub Actions.
- Deployed Azure AI Studio (now Microsoft Foundry) as a central hub in a hub-and-spoke architecture across 10+ subscriptions with Private Link, integrating Amazon Bedrock for foundation models and Amazon SageMaker AI and Azure Machine Learning for MLOps.
- Run enterprise Generative AI deployments (OpenAI GPT-4 and GPT-4o through Azure OpenAI, and Anthropic Claude) with rate limiting, quota management and content filtering, plus Azure AI Search for hybrid and vector (RAG) search.
- Run Azure API Management (APIM) as the gateway for platform and Generative AI APIs, defining API policies (rate limiting, quotas and request validation), API products and subscriptions for consuming teams, Azure Key Vault–backed named values and Application Insights monitoring, with API definitions, testing and documentation automated through CI/CD.
- Operate large-scale AKS/EKS clusters with multi-tenant isolation, HPA/VPA autoscaling, NGINX and Azure Application Gateway ingress and Argo CD ApplicationSets, raising availability from **97.5%** to **99.95%** with p95 inference latency under 200 ms.
- Built a shared Terraform/Terragrunt module library with Terratest, adopted by **100%** of company projects, cutting code duplication by **70%** and new-environment provisioning from **2 weeks to 4 hours**.
- Embed shift-left security (SonarQube, Snyk, Trivy, TruffleHog) with Azure AD SSO, RBAC and encryption, reducing critical production vulnerabilities by **20%**.
- Standardized metrics, logs and distributed tracing with SLIs/SLOs across clouds, reducing MTTR by **65%** (from 45 to 16 minutes).
- Lead AI-assisted engineering enablement with GitHub Copilot and Microsoft 365 Copilot, defining usage policies and security guardrails (data protection, code review and licensing rules) and driving adoption across **10+ engineers**.
- Scaled the platform to **500+ active users** (**150%** above target), 2,000+ monthly experiments, 200+ production models and 5M+ monthly API requests, enabling 50+ GenAI applications, including Sales360 and a Sales Virtual Assistant that supported **35%** growth in purchase volume for the commercial business unit.
- Maintained **100%** team retention over 2 years, with 2 internal promotions and a 4.7/5.0 team satisfaction score.

IVEX

February 2020 – Present

IVEX is my independent technology consultancy, through which I deliver cloud, platform engineering, DevOps and SRE engagements as a contractor for enterprise clients such as AB InBev, RDI Software, K2 Partnering Solutions, Lemongrass, Carnival Corporation, Randstad, Nokia, Mercedes-Benz, Prime IT, Capgemini, ActiveProspect, Nearsure, Thomson Reuters, Ilegra, Fanatics, Avenue Code, Miratech and Alvaria. My K2 Partnering Solutions and RDI Software engagements, also contracted through IVEX, are listed separately.

Principal Cloud & Platform Engineering Consultant

March 2024 – Present

Tech stack: AWS, Microsoft Azure, Azure API Management (APIM), Application Insights, GitHub Actions, Azure DevOps, Terraform, Terragrunt, Ansible, Docker, Kubernetes, Helm Charts, Git, GitHub, GitOps, Argo CD, Linux, PostgreSQL, MongoDB, Python, Java, Shell Script, Bash, C#, .NET, React, Vite.js, Streamlit, AWS CloudWatch, Azure Monitor, Grafana, Prometheus, Trivy, SonarQube, AWS Control Tower, Security Hub, GuardDuty, ECS Fargate, Lambda, HashiCorp Vault, External Secrets Operator, Terratest, Datadog, OpenTelemetry, Amazon Bedrock, Azure OpenAI, Amazon SageMaker AI, Jira, Confluence, Scrum, Kanban

- Led cloud architecture and transformation engagements for clients including Carnival Corporation, Warner Bros. Discovery, Thomson Reuters, Fanatics and Alvaria, guiding teams of Cloud, DevOps and SRE engineers and running 24/7 on-call incident response.

- Led the serverless cloud modernization, replacing legacy infrastructure with an AWS-native architecture (Amazon ECS Fargate, Terraform, Azure DevOps CI/CD, multi-AZ databases, automated backups and auto-scaling) and creating patterns reused in other client engagements.
- Deploy AWS landing zones with AWS Control Tower and security baselines (Security Hub, GuardDuty, AWS Config), plus Azure AD conditional access policies.
- Drive GitOps adoption with Argo CD and Helm on Kubernetes, and standardize Infrastructure as Code with Terraform, Terragrunt and Ansible across all environments.
- Build CI/CD pipelines with GitHub Actions and Azure DevOps for applications and infrastructure, reducing deployment lead time by **30%**.
- Design and operate Azure API Management (APIM) for client REST APIs, including API policies, API products and subscriptions, Azure Key Vault integration, Application Insights monitoring, and API testing and documentation in CI/CD pipelines.
- Embed shift-left security (SonarQube, Snyk, Trivy) in every pipeline and remove embedded secrets with TruffleHog and the External Secrets Operator.
- Establish observability with Datadog, Prometheus, Grafana, Grafana Loki, OpenTelemetry, AWS CloudWatch and Azure Monitor, with SLI/SLO dashboards and error budgets.
- Deliver **25–40%** infrastructure cost optimization for AWS and Azure client environments through right-sizing, Reserved Instances, Savings Plans, autoscaling and idle-resource cleanup.
- Delivered 5+ Generative AI applications on Amazon Bedrock and Azure OpenAI, including virtual assistants that cut customer response latency by **60%**, and an MLOps pipeline in Amazon SageMaker AI that reduced model time-to-market by **75%**.
- Manage data platforms on Amazon Aurora, PostgreSQL (Amazon RDS) and Azure Cosmos DB.
- Mentored 6 mid-level engineers into senior positions through structured career paths and weekly technical training labs.

Senior Cloud Architect & DevOps Consultant

March 2023 – March 2024

Tech stack: AWS, Microsoft Azure, GitHub Actions, Azure DevOps, Terraform, Terragrunt, Ansible, Docker, Kubernetes, Helm Charts, Git, GitHub, GitOps, Argo CD, Linux, PostgreSQL, MongoDB Atlas, Python, Java, Shell Script, Bash, C#, .NET, AWS CloudWatch, Azure Monitor, Datadog, Trivy, SonarQube, Doppler, 1Password, HashiCorp Vault, Falco, GitLab CI, AWS CloudFormation, AWS CDK, Amazon ECS Fargate, Azure VMSS, Jira, Confluence, Scrum, Kanban

- Delivered cloud transformation and DevOps engagements for clients including Nokia, ActiveProspect, Thomson Reuters and Mercedes-Benz.
- Architected and operated multi-cloud infrastructure on AWS and Azure for production-critical workloads, applying high-availability and resiliency patterns.
- Ran Kubernetes platforms on Amazon EKS and Azure AKS, with GitOps deployments through Argo CD and Helm across 6 EKS clusters, maintaining **99.9%** availability across 20+ production environments (2,000+ pods).
- Standardized Infrastructure as Code with Terraform, Terragrunt and Ansible, automating **95%** of infrastructure provisioning, reducing manual provisioning effort by **35%** and configuration flaws by **88%**.
- Integrated DevSecOps controls (SonarQube, Snyk, Trivy, Falco runtime detection) into GitHub Actions and Azure DevOps pipelines, reducing production vulnerability exposure by **20%**.
- Implemented secrets management with Doppler and 1Password, and observability with AWS CloudWatch, Azure Monitor and Datadog.
- Managed Amazon Aurora, PostgreSQL (Amazon RDS) and MongoDB Atlas databases.
- Built **50+ pipelines** on GitHub Actions, GitLab CI and Azure DevOps with a **95%** build success rate and a change failure rate below **5%**.
- Reduced storage costs by **40%** and compute costs by **30%** through lifecycle policies and automated scaling.
- Acted as client-facing technical lead and mentored engineers in cloud architecture, platform engineering and SRE practices through 100+ code reviews.

Cloud, DevSecOps & SRE Consultant

February 2020 – March 2023

Tech stack: AWS, Microsoft Azure, GCP, GitHub Actions, Azure DevOps, Jenkins, Terraform, Terragrunt, Ansible, Docker, Kubernetes, Helm Charts, Git, GitHub, Azure Repos, Linux, Kafka, PostgreSQL, Redis, Python, Java, Shell Script, Bash, Groovy Script, C#, .NET, React, Spring, Maven, AWS CloudWatch, Azure Monitor, Datadog, Grafana, Prometheus, Trivy, SonarQube, Checkmarx, HashiCorp Vault, Jira, Confluence, Scrum, Kanban

- Supported clients including Lemongrass, Nokia, Infovista, Randstad, Honda, EDP and Uber.

- Managed and deployed the AWS environment (EC2, VPC, Internet Gateway, NAT Gateway, API Gateway, EFS, ElastiCache Redis, MSK, EKS, ECS, ECR, S3, ASG, ALB, RDS Aurora, CloudWatch, DMS, CDN).
- Managed and deployed the Microsoft Azure environment (VM, VMSS, Key Vault, IAM, SQL Database, VPN Gateway, App Services, VNET, AKS, ACR, Load Balancer, DNS Zone, APIM, Storage Account, Azure Functions).
- Managed and deployed the Google Cloud (GCP) environment (GKE, VM, Cloud Storage, Persistent Disk, Cloud SQL, Apigee, NAT, Load Balancer, IAM, VPC).
- Operated containerized workloads and orchestration (Docker, Kubernetes), Infrastructure as Code (Terraform, Terragrunt) and configuration management (Ansible).
- Applied SRE practices, monitoring the main metrics, availability and performance of critical applications and services in the cloud (AWS CloudWatch, Azure Monitor, Datadog, Grafana, Grafana Loki, Grafana Tempo and Prometheus).
- Implemented DevSecOps security pipelines (Trivy, SonarQube, TruffleHog, Checkmarx, Snyk, Black Duck, HashiCorp Vault).
- Developed CI/CD pipelines with Jenkins, GitHub Actions and Azure DevOps to deploy applications (on Kubernetes using Helm Charts and Kubernetes manifests) and manage infrastructure.
- Managed Amazon Aurora, PostgreSQL (Amazon RDS) and Azure Cosmos DB databases.
- Containerized 30+ standalone applications into microservices, reducing customer infrastructure costs by **40%**.
- Built 50+ CI/CD pipelines that moved delivery from weekly to daily releases with a **95%** success rate.
- Removed **100%** of plain-text secrets from production code with HashiCorp Vault and cloud-native vaults, supporting clients' external compliance audits.
- Built 200+ monitoring dashboards (Datadog, Prometheus, Grafana, Loki, New Relic, Splunk) with PagerDuty escalation, improving mean time to detect by **70%**.

RDI Software

February 2021 – February 2022

Cloud Engineer | DevOps Specialist (contract through IVEX)

Tech stack: AWS, GitHub Actions, Terraform, Docker, Kubernetes, Python, SonarQube, New Relic, Git, Linux, Kafka, Redis, Java, Spring, Maven, Veracode, Amazon MSK, AWS X-Ray, AWS WAF, IRSA, Spring Boot, Jira, Scrum, Kanban

- Managed and deployed the AWS environment (EC2, VPC, Internet Gateway, NAT Gateway, API Gateway, EFS, ElastiCache Redis, MSK, EKS, ECR, S3, ASG, ALB, RDS Aurora, CloudWatch, DMS), supporting CI/CD processes (GitHub Actions), containers and orchestration (Docker, Kubernetes) and Infrastructure as Code (Terraform).
- Supported applications and tools for the business unit's products and services, monitoring the main metrics, availability and performance of critical services (SRE practices with AWS CloudWatch and New Relic).
- Led research and development, proofs of concept (POCs) and infrastructure design for cloud applications.
- Developed Shell scripts and Python libraries to automate CI/CD processes.
- Advised development squads on splitting a monolithic Java application into **25+ microservices** (Strangler Fig pattern, Spring Boot, Apache Kafka on Amazon MSK), moving to daily production releases.
- Cut delivery pipeline runtime from **4 hours to 5 minutes** with GitHub Actions, and achieved zero long-lived credentials with the AWS Secrets Manager CSI driver and IRSA.
- Improved source code quality, detecting bugs, vulnerabilities and "code smells" with SonarQube and Veracode.

AB InBev

August 2020 – February 2021

Senior Cloud, DevSecOps & SRE Engineer

Tech stack: Azure, Azure DevOps, Jira, Trivy, TruffleHog, Snyk, Checkmarx, Python, HashiCorp Vault, Terraform, Docker, Kubernetes, SonarCloud, MongoDB, RabbitMQ, Istio, Datadog, New Relic, Argo CD, Git, Linux, Scrum, Kanban, Java, Spring, Maven, Gradle

- Managed and deployed the Microsoft Azure environment (VM, VMSS, Key Vault, IAM, SQL Database, VPN Gateway, App Services, VNET, AKS, Load Balancer, DNS Zone, API Gateway, Storage Account, Azure Functions), supporting CI/CD processes (Azure DevOps, Python and Shell scripts), containers and orchestration (Docker, Kubernetes), Infrastructure as Code (Terraform, Terragrunt) and Ansible.
- Supported applications and tools for the business unit's products and services, monitoring availability and performance of critical services (SRE practices with Azure Monitor, New Relic and Datadog).
- Led research, proofs of concept (POCs) and infrastructure design for cloud applications, including NoSQL databases (MongoDB and Redis).
- Developed Shell scripts and Python libraries for CI/CD automation; worked with messaging (RabbitMQ / CloudAMQP) and GitOps (Argo CD).

- Worked with SwaggerHub for API development and used SonarQube / SonarCloud to detect bugs, vulnerabilities and "code smells".
- Analyzed and implemented DAST (Dynamic Application Security Testing), SAST (Static Application Security Testing) and IAST (Interactive Application Security Testing) within CI/CD pipelines (Trivy, TruffleHog, Checkmarx, Snyk, Black Duck, HashiCorp Vault, HashiCorp Consul).
- Implemented a highly available 3-node HashiCorp Vault cluster for dynamic, short-lived credentials (Zero Trust).
- Managed 100+ microservice APIs in Azure API Management with OAuth 2.0/JWT authentication and rate limiting.
- Ran GitOps with Argo CD across 4 multi-region AKS clusters, cutting release configuration errors from **15%** to under **1%**.
- Directly hired by AB InBev in August 2020, after six months on the program as a K2 Partnering Solutions consultant.

K2 Partnering Solutions

February 2020 – August 2020

DevOps & SRE Engineer (contract through IVEX)

Tech stack: Azure, Azure DevOps, Jira, Trivy, TruffleHog, Snyk, Checkmarx, Python, HashiCorp Vault, Terraform, Docker, Kubernetes, SonarCloud, MongoDB, RabbitMQ, Istio, Datadog, New Relic, Git, Linux, Scrum, Kanban, Java, Spring, Maven, Gradle

- Designed and operated Azure cloud infrastructure across AKS, API Management, Storage Accounts, and virtualized compute resources supporting enterprise application workloads.
- Developed and maintained CI/CD pipelines using Azure DevOps, Terraform, and Docker, enabling automated Kubernetes deployments and improving delivery consistency and reliability.
- Evaluated and integrated APM (Application Performance Management) solutions including Datadog and New Relic to strengthen observability across distributed cloud applications and services.
- Led an evaluation of 8 APM and observability tools (including Datadog, New Relic, Dynatrace and Splunk) that resulted in the selection of Datadog.
- Integrated and piloted Snyk, Trivy, Checkmarx, TruffleHog, and SonarCloud into development pipelines to strengthen SAST, DAST, dependency, and secrets-security practices, and educated development teams on common security issues.
- Collaborated with engineering and architecture teams to establish log aggregation, monitoring, security instrumentation, and platform observability standards.

Thomson Reuters (Softway S.A. until its 2013 acquisition)

February 2003 – February 2020

Lead DevOps Engineer

July 2017 – February 2020

Tech stack: AWS, Docker, Ansible, Puppet, Datadog, Splunk, Java, Oracle, PostgreSQL, SQL, PL/SQL, Maven, Nexus, JFrog, Linux, Windows, Jira, Jenkins, CVS, Subversion, Git, GitLab, Centura (SQL/Windows), Groovy, Scrum, Kanban

- Acted as technical leader, designing solutions and introducing best market practices within the DevOps culture.
- Led a DevOps transformation for **30 developers** and **100+ applications**, cutting the release cycle from **12 weeks to 2 weeks**; led and mentored a team of 5 DevOps engineers.
- Built 20+ reusable Terraform modules and 30+ Ansible playbooks, cutting new-environment setup from **3 weeks to 4 hours**.
- Migrated 15 years of CVS and 10 years of SVN history to Git/GitLab and trained **30+ developers** on branching and code review standards.
- Implemented AWS solutions (VPC, EC2, S3, ELB, Auto Scaling Groups (ASG), EKS, ECR, EBS, RDS, IAM, CloudFormation, Route 53, CloudWatch, CloudFront, SQS, SNS, Load Balancer, Elastic Beanstalk, Redis), CI/CD process automation (Jenkins, Groovy Script, Java and Shell Script), and metrics and performance monitoring (Datadog, Splunk), working with Docker, Oracle Database, PostgreSQL, MySQL, Ansible and Puppet.
- Administered Oracle database servers: installation, maintenance, monitoring and provisioning of new servers.
- Planned and executed the adoption of the DevOps culture across the company, specifying and developing tools, standards and procedures for the development, testing and other teams.
- Automated the development, testing and continuous delivery process end to end with Jenkins and Groovy, across CVS, SVN and Git repositories.
- Developed a tool to install PL/SQL objects and scripts in customer databases (10,000+ objects across **70+ client databases**, cutting deployment time from **6 hours to 90 minutes**), and another tool for document generation (e.g. release notes). Both tools were built in Java.
- Co-led the automation of releases, patches and builds, previously done manually.

- Redesigned the cloud process, including customer cataloging for cloud contracts and the flow of the entire process of updating the databases and applications available in each client's Citrix. The process covered **around 70 clients**, with the number growing every year.

Technical Lead

January 2016 – July 2017

Tech stack: Java, Oracle, SQL, PL/SQL, Maven, Nexus, JFrog, Linux, Windows, Jira, CVS, Subversion, Git, GitLab, Centura (SQL/Windows), Scrum, Kanban

- Led a development team of **12 engineers**, designing solutions, estimating efforts, reviewing code and introducing best practices in the product's technology stack: SQL/Windows (Centura), SQL, PL/SQL, Oracle Database.
- Planned team capacity, vacations and distribution of resources among Scrum teams to develop the requirements requested by the Project Manager.
- Took part in monthly Root Cause Analysis (RCA) meetings, defining corrective actions for each issue to prevent or minimize recurrence.
- Encouraged developers to create internal projects that improved the development team, such as product screen standardization, database modeling, automatic generation of hot fix packages, database comparison process, and training on technologies and products, both technical and functional.

Senior Functional Architect

August 2008 – January 2016

Tech stack: Scrum, Enterprise Architect, UML

- Led functional analysis and design using UML (Unified Modeling Language) and Enterprise Architect.
- Specified requirements, business rules and functional design for Foreign Trade (Export) systems, using UML diagrams.
- Specified requirements and functional design for a worldwide program migrating existing systems to a new multilayer platform (Java, JSF, Hibernate).
- Helped the team move from the waterfall model to Scrum, and presented 30+ Sprint Reviews in English for the stakeholders and Product Owner.
- Anticipated changes to government systems by specifying requirements, business rules, functional design and testing, integrating the new system with the export system, delivering customer gains, lower costs and better operational performance, with a high level of satisfaction among clients and management.
- Performed, with the requirements/functional approvals team, change request (RM) testing and version approvals.
- Reduced the number of change requests (RM) caused by functional issues, lowering internal operating costs.

Development Coordinator

August 2006 – August 2008

Tech stack: CVS, Subversion, Oracle, SQL, PL/SQL, Centura (SQL Windows), Java

- Coordinated a team of **12 developers**, including resource allocation, activity planning, feedback and ABC performance evaluations, and acted as technical mentor to developers and analysts, delegating their work.
- Led the team responsible for improving the structure of the international export system, earning recognition and making it the basis for the national export system.
- Led the team improving the structure of objects in CVS version control and internal procedures, improving system quality and development efficiency.
- Managed the team that built a new system (RegInt – International Regimes) and was responsible for team motivation and performance bonuses.

Development Analyst

February 2003 – August 2006

Tech stack: CVS, Subversion, Oracle, SQL, PL/SQL, Centura (SQL Windows), Java, Siscomex

- Built the integration between the export system and Siscomex (Brazil's Foreign Trade System) for the registration of all exports, automating data entry and reducing costs for customers.
- Delivered system enhancements covering technical analysis, structuring, modeling, development and testing, and acted as technical mentor for less experienced analysts on projects for large national and multinational companies.
- Created reports by extracting data from the export system database, using Report Builder and SQL on Oracle.
- Performed technical analysis and development with Oracle Database and PL/SQL and SQL Windows, unit testing, and database modeling with ERwin and ModelRight.
- Worked on closing versions, releases and patches, and structured CVS version control folders.

Pontifical Catholic University of Campinas

March 2011 – August 2018

University Professor, School of Systems Analysis

Tech stack: Oracle, SQL, PL/SQL, Java, C#, MongoDB, Power BI, C/C++

- Taught **16 undergraduate subjects** over 7+ years across five programs: Information Systems, Telecommunications Engineering, and technology degrees in IT Management, Computer Networks and Digital Games.
- Taught Database courses (Database I, II, A, B and C) using Oracle, covering relational and NoSQL databases.
- Taught Algorithms and Programming using C, emphasizing computational thinking, problem-solving, and structured software development.
- Instructed Commercial Programming Language (C#), connecting academic concepts with enterprise development practices.
- Taught General Systems Theory, Research in Emerging Technologies, and Topics in Software Systems Development.
- Taught technologies including Oracle, SQL, PL/SQL, MongoDB, and Power BI, supporting practical preparation for enterprise software and data engineering careers.

SPEAKING & TEACHING ENGAGEMENTS

- Instructor, Azure Cloud Computing Bootcamp, Module 3: Development Solutions and Management Tools, IGTI (now XP Educação), September 2021.
- Speaker, "DevOps Training", Association of Technology Professionals and Companies (APETI), São José do Rio Preto, Brazil, October 2023.

TECHNICAL SKILLS

AI & ML Platforms 3+ years Microsoft Foundry, Azure OpenAI, Azure AI Search, Amazon Bedrock, Azure Machine Learning, Amazon SageMaker AI, OpenAI GPT, Anthropic Claude, RAG, vector search, MLOps, LLMOps, GitHub Copilot, Microsoft 365 Copilot

AWS 8+ years EC2, VPC, Internet Gateway, NAT Gateway, API Gateway, EFS, ElastiCache Redis, MSK, EKS, ECR, S3, ASG, ALB, RDS Aurora, Route53, CloudFront, CodePipeline, CodeCommit, CodeBuild, CodeDeploy, Redshift, SNS, SQS, Elastic Beanstalk, CloudFormation, Lambda, IAM, Systems Manager, Secrets Manager, CloudWatch, DMS, CloudTrail, X-Ray, WAF, CDN, Control Tower, Security Hub, GuardDuty, ECS Fargate

Azure 6+ years VM, VMSS, Key Vault, IAM, SQL Database, App Services, Azure Functions, Storage Account, AKS, ACR, API Management, VNET, Load Balancer, Cosmos DB, Azure Monitor

GCP 2+ years GKE, VM, Cloud Storage, Persistent Disk, Cloud SQL, Apigee, NAT, Load Balancer, IAM, VPC

Operating Systems 15+ years Linux / Windows

Programming Languages 20+ years Java, Python, C/C++, C#, Groovy, SQL, PL/SQL, JavaScript, SQL/Windows

Relational Databases 20+ years Oracle, MySQL, PostgreSQL

NoSQL 8+ years MongoDB, Redis, Cosmos DB

Containerization 8+ years Docker, Kubernetes, Docker Swarm, Helm

API Management 5+ years Azure API Management (APIM), Apigee, REST APIs, API policies, API products and subscriptions, API security, API testing and documentation, Application Insights, SwaggerHub

Messaging 3+ years Apache Kafka, Amazon MSK, RabbitMQ

Observability and Monitoring Tools 8+ years Datadog, New Relic, Splunk, Grafana, Prometheus, AWS CloudWatch, Azure Monitor, OpenTelemetry, AWS X-Ray, PagerDuty

CI/CD Tools 8+ years Jenkins, GitHub Actions, Azure DevOps, GitLab CI, AWS CodePipeline, Argo CD; blue-green, canary and rolling deployments

Security Tools 4+ years TruffleHog, Gitleaks, Snyk, Checkmarx, Black Duck, Trivy, SonarQube, Veracode, Falco, Aqua, OWASP ZAP, SonarCloud

Configuration Management Tools 6+ years Ansible, Puppet

IaC Tools 8+ years Terraform, Terragrunt, AWS CloudFormation, Azure Resource Manager, AWS CDK, Terratest

Secrets Management — HashiCorp Vault 2+ years also AWS Secrets Manager, Azure Key Vault, External Secrets Operator, Doppler, 1Password

Version Control 20+ years CVS, Subversion, Git, GitLab, GitHub, Bitbucket

Process/Methodologies 12+ years Scrum, Kanban, Jira, Confluence, Azure Boards

Build Tools 12+ years Maven, Gradle

EDUCATION

Master of Business Administration (MBA) 2006–2008
Getúlio Vargas Foundation (FGV)

Bachelor of Science in Computer Engineering 1998–2002
Pontifical Catholic University of Campinas

LANGUAGES

Portuguese — Native or bilingual proficiency **English** — Native or bilingual proficiency

TRAINING & COURSES

Edureka: AWS Certified DevOps Engineer Training (72h) · Continuous Integration with Jenkins Certification Training (60h) · Docker Training and Certification (36h) · Git and GitHub Professional (36h) · Linux Fundamentals Certification Training (48h) · Python Essentials Training (30h) · Splunk Training & Certification - Power User & Admin (48h) · DevOps Engineer (90h) · Microsoft Azure Developer Associate Training (AZ-203) (72h)

Globalcode: Java Academy (128h)

MongoDB University: M001: MongoDB Basics (10h) · M103: Basic Cluster Administration (16h) · M121: The MongoDB Aggregation Framework (24h) · M320: Data Modeling (16h)

Redis Labs: RU101: Introduction to Redis Data Structures (18h) · RU102J: Redis for Java Developers (15h) · RU102JS: Redis for JavaScript Developers (15h) · RU201: RediSearch (18h) · RU202: Redis Streams (15h)
